

SEALS. REALLY. WELL.

CUTS. REALLY. WELL.

BONDS. REALLY. WELL.

Secure. Durable. Customer-oriented.

more than **30** years for our
customers' success

Our company policy is characterized by our priorities: customer-orientation and excellent quality. DRG has been a reliable partner in the seal and adhesion sector for more than 30 years. We guarantee our customers a significant advantage with top-quality standard products and innovative special solutions.

More than 30 years DRG. This anniversary is gratification for us, however, we see it as our duty to meet our customers' needs quickly and economically with our creativity and experience.

SEALS.REALLY.WELL.
CUT.REALLY.WELL.
BONDS.REALLY.WELL.

Under this motto we create durable connections. Customers from the industrial, commercial and craftsmen sectors have relied on our commitment and competent guidance for many years.

- Machine and plant engineering
- Window and door industry
- Joiners and carpenters
- Plumbers
- Roofers and industrial buildings
- Pre-fabricated housing industry
- Solar and photovoltaic technology
- Automobile industry and sub-contractors
- Agricultural machinery technology and cab construction
- White goods industry
- Switchgear production
- Transport protection

SEALS. REALLY. WELL.

CUTS. REALLY. WELL.

BONDS. REALLY. WELL.

Around a third of our products are exported to Hungary, the Czech Republic, Slovenia and Croatia. Our customers can also be found in Dubai and New Zealand. We follow the continual development of the market and expand to other countries with our customers, supporting them to the best of our ability.

PRECISE, QUICK
AND RELIABLE

Well-founded know-how and 30 years' experience make us a sought-after partner for all our products, such as flat seals and adhesive tapes made from EPDM rubber, polyethylene, aluminium tapes and double-sided tape. Our superior-performance tapes are also in use in the aviation industry. We always have the right solution for our customers. Master samples for stamped parts and water-jet cuts are ready within 2 to 3 working

days from the customer design. We are also pleased to advise you on the choice of material before the start of your new development and supply prototypes promptly. Due to the flexibility of our production we are also in a position to

meet complex requirements at short notice. For the production of your customized seals there is a choice of two processes:

STAMPING

is suitable for seals which are adhesive on one or both sides. The basis for the production of stamping moulds are CAD data in DXF or DWG format. By this method we manufacture small series as well as large quantities and can act flexibly on our customers' behalf.

WATER-JET CUTTING

is an excellent solution for cutting strong material. This is an attractive alternative to classic stamping with regard to both technology and cost-efficiency. Water-jet cutting provides very precise seals, non-adhesive and up to 100mm thick, which can be produced without additional moulds. The process is suitable for the production of large series but also for the production of small quantities or individual parts. The latter possibility poses the perfect solution for prototype production. No moulds are required for the production of seals on our CNC-controlled facility, only CAD data in DXF or DWG format.
